Junior Software Engineer

[Apply Now!](#)

Description

We are searching for a Junior Software Engineer to join our 26-person San Diego engineering team. This role is an excellent opportunity to grow and solidify your web application development skill set. Our tight-knit team combines a Scrum process with a strong testing culture, continuous integration and a (potentially unhealthy) obsession with puppies and kittens (see below re: pet-friendly office!). You'll have a leg up if you're passionate about

health-care and geek out on delivering an amazing and useful application.

As a Junior Software Engineer, you will:

- Develop and maintain our suite of web applications, this includes both front-end work in our JavaScript SPAs and Rails APIs
- Actively participate in our Scrum process paired with collaborating with our product team to develop high-caliber software
- Perform standard software development functions (testing, code review, etc.)

Our benefits include:

- Competitive compensation, insurance, and a 401k with company match
 - Flexible work hours and days, including work-from-home opportunities
 - Community-oriented, distraction-free office in San Diego focused on innovative product development
 - Time dedicated to exploring new languages/frameworks and contributing to open source projects
 - A pet-friendly office (please bring your dog)
 - Flexible PTO

About you

You're our dream candidate if you:

- 1-2 years of web application development experience
- Working knowledge of a scripting language (preferably Ruby or Javascript)
- Experience working with a web development framework (Rails, Django, Symfony, etc.)
- Experience writing software tests during the development process
- Understanding of the fundamentals of developing software, particularly object-
